POPULATION HEALTH RESEARCH FELLOWSHIP

This fellowship prepares practicing health care professionals for careers in population health research.

The fellowship will provide didactic and experiential training in community-engaged research, clinical informatics, epidemiology, biostatistics, research methods, clinical trial design, implementation science, quality improvement, grant and manuscript writing, and dissemination.

GOALS

- Participate in formal training in population health and clinical research through scheduled didactic sessions at Case Western Reserve University and at MetroHealth.
- Obtain exposure to and experience with research methods, clinical trial design, implementation science, quality improvement, population health, proposal development, and leadership
- Complete a mentored population health research project and a community-based quality improvement project.

BENEFITS

- Mentored research projects and career development planning by MHS and CWRU faculty
- Collaborate with community partners to address population health needs.
- Participate in robust grant writing training
- Improve communication and dissemination skills in oral presentation, manuscript writing, and grant preparation.
- Shared learning experiences with VA Quality Scholars, Medical Informatics Fellows, and Mentored Clinical Research Scholars

Applicants must be practicing clinicians of The MetroHealth System (including nurse practitioners, therapists, dentists, clinical psychologists, physician assistants, or physicians)
Applicants from historically disadvantaged backgrounds are encouraged to apply

Ideal applicants have excelled in their education, have completed their formal clinical training, are prepared to devote two consecutive years to research, and are able to devote no more than 30% effort to clinical practice within The MetroHealth System.

Currently, we are using a rolling admissions process.

Please submit your CV & Letter of Inquiry by **April 30, 2026**
